

## Solid FRP Louvers

Chem-Pruf standard door louvers were designed to protect privacy (no direct view), provide good air flow & ease of cleaning. The result is our standard inverted "V" louver. The door louvers are built into the door at the time of manufacture. The louvers have 25 mils of high density marine grade gelcoat molded in at time of manufacture, same finish as the door.

Chem-Pruf louvers work well with an accompanying door window and they are perfect for a wide range of applications.

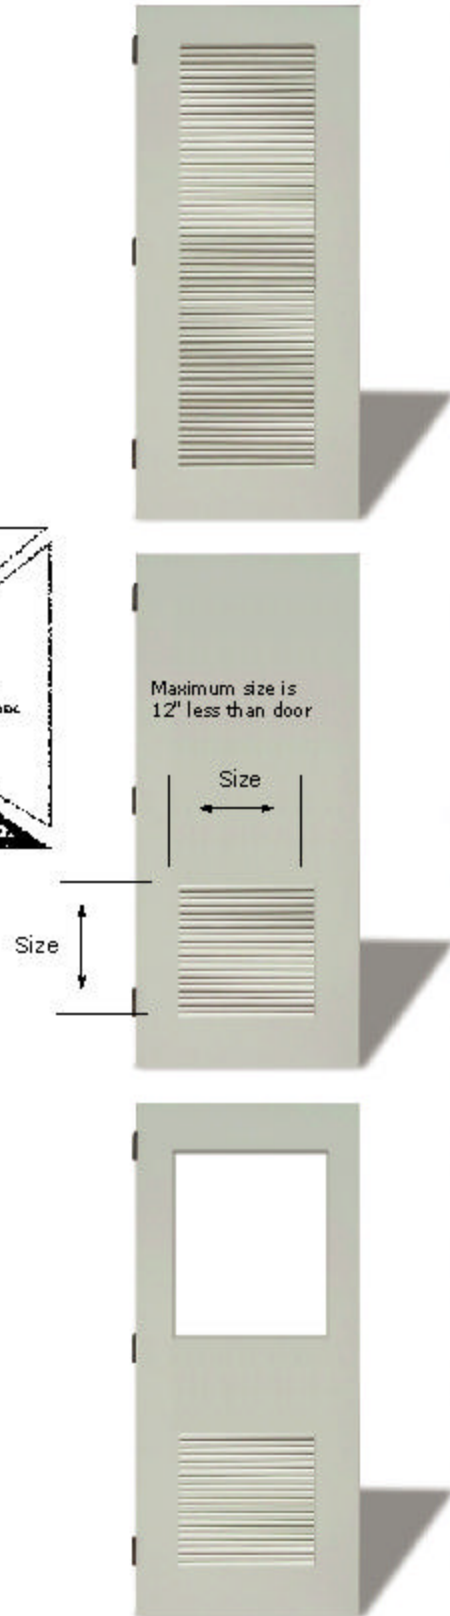

- ¥ Utility Room
- ¥ Laundry Room
- ¥ Bath & Shower Room
