
Care and Cleaning Recommendations

All Chem-R Intersion door and frame products are made of fiberglass reinforced polyester components either in a polyurethane or a polyurethane gelcoat color coating. This finish is stain and abrasion resistant. To protect the finish requires reasonable care as periodically with warm water and a mild detergent applied to the fiberglass or polyurethane finishes. Protectants can be used on the surfaces of Chem-R Intersion products and oxidation removers can be used to remove slight surface oxidation.

Typically products designed for the marine market are best suited for these cleaning and protectant products. General household products are available from dealers as well as other retail manufacturers.

Never use an abrasive scoring products, cleaners, steel pads or cleaners that contain sodium hydroxide or other chemicals not approved for fiberglass or polyurethane finishes.

For cleaner compatibility questions or concerns consult the cleaner manufacturer or call the Chem-R factory for assistance.
